To whom it may concern,

Richard Elliott was in the employee of Art Street Interactive for more than 5 years. During that time Richard was instrumental in the company's growth as it moved from Website/E-commerce development to Networked Application development. Richard's ability to rise to each new challenge by educating himself and/or quickly identifying new solutions was unparalleled.

As an Application Developer, Richard was charged with developing reusable modules as well as building one-off application solutions. His core development skills included HTML, CSS, ASP, VBScript, Visual Basic, C#, Javascript, Java, SQL, and .NET. Richard also proved quite adept in using Macromedia and Adobe's website development suites (Fireworks, Dreamweaver, Freehand, Illustrator, Photoshop, and Flash). He was able to extend graphic conventions developed by the designer(s) and create new graphical elements.

Website and Application hosting is also integral to Art Street's services and Richard assisted in maintaining our (Windows) server hardware, upgrades and installs. On more than one occasion Richard demonstrated his hardware abilities by building servers and desktops from the ground up.

Richard was one of the most efficient Art Street developers. He found and utilized very strategic resources, was capable of providing very directed solutions to complex problems, and confidently conquered each challenge - no matter how imposing.

...and he's real nice guy, amenable to everyone - clients and colleagues alike.

Richard left the company on excellent terms and would most definitely be considered for rehire.

Regards,

Greg Hechler
President
Art Street Interactive, Inc.
